ABSTRACT:

An aircraft wireless data communication system includes an aircraft computer/server
in communication with a plurality of aircraft systems. Access to the aircraft
systems via the computer/server is available in real-time via wireless
communication with a ground-based computer system. The ground-based computer system
includes a computer that can be accessed from one or more networks of computers.
Each authorized computer user on an airline, manufacturer, or supplier network has
remote real-time access to the aircraft computer/server. Properly authorized remote
users can: perform comparisons between the aircraft actual configuration identity

and an aircraft authorized configuration identity; perform system diagnostic testing; view system status and parameters; collaborate with users from local and remote organizations using real-time aircraft data; and upload and download software and data to and from aircraft systems.

ABSTRACTED-PUB-NO: US20040106404A
BASIC-ABSTRACT:

NOVELTY - A server (12) in the aircraft (11) communicates with a ground based
communication system (GBCS) (16) linked to the aircraft manufacturer (26), aircraft
component supplier (28) and airline organization (30). The GBCS receives aircraft
configuration data from the server.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) aircraft wireless data communication system;

(2) aircraft and GBCS wireless communication system;

(3) aircraft communication method;

(4) aircraft configuration management method;

(5) aircraft operating condition assess method; and

(6) aircraft conformity determination method.

USE - For managing manufacture, monitor and maintenance of aircraft. Also for managing manufacture, monitor and maintenance of ship, vehicle, train and spacecraft.

ADVANTAGE - Personnel can remotely monitor real time status of aircraft system using the aircraft configuration data.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the remote aircraft manufacturing monitoring, maintenance and management (RAM) system.
